CE MARK APPROVAL...December 15, 2009

HID Ultraviolet announces that it has received approval to CE Mark it's full line of Portable UV Curing Equipment, allowing all products to be distributed throughout Europe as well as in all countries recognizing the CE Mark.

HID Ultraviolet's product line includes the Mako Handheld Series, Bulldog Series, and Hammerhead Series. All machines are used to cure UV coatings that are applied to concrete, wood, vinyl, or marble surfaces, providing an instant cure and allow for full use immediately. The Mako is a handheld unit that is used for curing edges, corners, hard to reach areas, and countertops. The Bulldog machines are primarily used for wood and vinyl floors or for smaller areas that need to be cured. Concrete floors, as well as vinyl, typically require the use of the Hammerhead machines, as it provides a wider cure path and more power.

"Accomplishing the CE Mark is an important achievement in our strategy for reaching the global market," states Bob Lesko, President of HID Ultraviolet. "We are committed to producing the highest quality and safest equipment available in the world. We are pleased to have attained the CE Mark and look forward to announcing other achievements in the future."

A NEW WAY.....

HIDUV's Equipment and UV floor coatings: a revolutionary way to finish floors.

INSTANT START

Lighting system is instant on with no warm-up or cool down periods and no mechanical shutters.

PATENTED TECHNOLOGY

Advanced technologies make HIDUV's equipment the most powerful and reliable machines available.

FEATURES & BENEFITS

Fast, safe, and easy to use.

VERSATILITY

Product line includes a variety of models to suit all needs.
