

HAMMERHEAD

series portable uv floor curing equipment

A NEW WAY

The HAMMERHEAD and UV floor coatings: a revolutionary way to finish floors.

INSTANT START

Lighting system is instant on with no warm-up or cool down periods and no mechanical shutters.

PATENTED TECHNOLOGY

Advanced technologies make the HAMMERHEAD the most powerful and reliable machine available.

FEATURES & BENEFITS

Fast, safe, and easy to use.

VERSATILITY

Product line includes a variety of models to suit all needs.

HAMMERHEAD UV Floor Curing Equipment is a heavy duty, portable line of floor curing machines used for industrial and commercial floor finishing. Patented Instant Start/Hot Restrike technology along with proprietary irradiator, lamp, and reflector designs make the HAMMERHEAD Series the most powerful and efficient floor curing machines available. Designed primarily for use on concrete floors and with coatings that are 100% solids, these machines will outperform anything else available.

The HAMMERHEAD Series are fully automatic and self propelled and can be programmed to cure at any speed. The large digital display and keypad entry panel make it easy to program and read cure speeds at a glance. Instant Start/Hot Restrike technology eliminates the use of shutters, which are prone to failure from heat and dirt, making this equipment low maintenance and much more efficient to operate. The irradiator and lamp designs translate to more power per watt than any other system available.

Two HAMMERHEAD models are available: 26" cure width and 34" cure width. Both come standard with many safety features: an accelerometer circuit that detects tilt angle and prevents exposure to UV, non-movement sensors that prevent floor scorching, thermo transducers prevent overheating, a light curtain that minimizes light leakage around the irradiator, safety interlocks on all covers and a kill button on the hand grip. A Zero Degree turn radius allows for easy maneuvering.

After the floor is prepared in the traditional way, the high tech UV coating is applied and the machine is moved onto the surface curing it instantly, creating a diamond hard finish impervious to chemicals and abrasion. UV floor coating technology and the HAMMERHEAD Series have now made it possible to provide superior finishes in a fast, convenient, and cost saving method with no odor and no VOCs. Both clear coats and pigments can be cured with HIDUV equipment. Fast, safe, reliable, and easy to use make the HAMMERHEAD Series the only choice for quality floor curing.

HAMMERHEAD MODELS

Model	Cure Path	Watts	Power	Weight	Size
26-8000A	26 inch	8000	208/240V, 60Hz, 45A	285 lbs.	26x28x31-45"
26-8000A	26 cm	8000	400V, 50Hz, 25A	135 kg	66x71x79-114 cm
34-10000A	34 inch	10000	208/240V, 60Hz, 50A	300 lbs.	34x28x34-45"
