

# MAKO-T

## handheld uv surface curing equipment

### A NEW WAY.....

The MAKO-T and UV coatings: a revolutionary way to finish floors, cabinets, countertops and many other surfaces.

### INSTANT START

Lighting system is instant on with no warm-up or cool down periods and no mechanical shutters.

### PATENTED TECHNOLOGY

Advanced technologies make the MAKO-T the most powerful and reliable handheld unit available.

### FEATURES & BENEFITS

Fast, safe, and easy to use.

### VERSATILITY

For use on countertops, bath tubs, or other curved and tight areas.

The MAKO-T is the latest in the MAKO Series of Handheld UV Curing Equipment. The design features a lamp head perpendicular to the operator's handle, making it well suited for curing bath tubs, countertops, and other areas where cable management and edges are concerns.

HID Ultraviolet's award winning line of UV Curing Equipment exclusively features Instant Start technology, which allows for lamps to be started and restarted as needed by the operator, instead of producing unwanted stray UV when not in immediate use. A built in range finder keeps the operator aware of the distance to the curing surface, ensuring optimal curing speed, and reducing unwanted exposure by disabling the lamp when not curing a surface. The MAKO-T operates at 1200W, off of a standard 120V or 230V (European) outlet. After the surface is prepared in the traditional way, the high tech UV coating is applied and the MAKO-T is moved over the surface curing it instantly. UV coating technology and the MAKO series have now made it possible to provide a superior finish in a fast, convenient, cost saving method.

Standard features on the MAKO-T:

- Auto-Sensing Range Finder
- Range Control Mode Toggle
- Spring Loaded Trigger
- Thermo Sensors
- Shock Resistant Lamp Housing
- Impact Resistant Case
- CE Mark

### MAKO-T MODELS

Model	Watts	Power	Weight	Size
MAKO-T-6-1200	1200	120V, 60Hz, 15A	57 lbs.	22x18x10.5"
MAKO-T-6-1200	1200	230V, 50Hz, 10A	27.2 kgs	55.9x45.7x26.7cm
