

MAKO

handheld uv surface curing equipment

A NEW WAY.....

The MAKO and UV coatings: a revolutionary way to finish floors, cabinets, countertops and many other surfaces.

INSTANT START

Lighting system is instant on with no warm-up or cool down periods and no mechanical shutters.

PATENTED TECHNOLOGY

Advanced technologies make the MAKO the most powerful and reliable handheld unit available.

FEATURES & BENEFITS

Fast, safe, and easy to use.

VERSATILITY

Use as a handheld or with the ergonomic friendly accessory kit.

The MAKO UV Surface Curing Equipment is the latest in floor, cabinet, and countertop finishing technology. Used for curing concrete, wood, vinyl, and marble surfaces, the MAKO employs state of the art ultraviolet lighting for an instant cure of today's cutting edge UV coatings.

HIDUV has combined patented and proprietary technologies to produce revolutionary portable UV Curing Systems. Continuous Wave Xenon lamps powered by instant start/hot re-strike power supplies provide high energy output that can be turned on and off with no cool down or warm up periods. Reflector and irradiator designs can produce up to 40% more energy than conventional systems. The MAKO is the most powerful and fastest machine available today. Used to cure hard to reach areas, floor edges, corners, countertops, and non-flat surfaces, the MAKO is light, compact, and easy to use. After the surface is prepared in the traditional way, the high tech UV coating is applied and the handheld is moved on the surface curing it instantly. UV coating technology and the MAKO have now made it possible to provide superior finishes in a fast, convenient, and cost saving method.

Standard features on the MAKO include:

- Auto-Sensing Range Finder
- Spring Loaded Trigger
- Thermo Sensors
- Shock Resistant Housing
- Impact Resistant Case
- CE Mark

Optional Extension Control Handle

MAKO MODELS

Model	Watts	Power	Weight	Size
6-1200	1200	120V, 60Hz, 15A	50 lbs.	22x14x9"
6-1200	1200	230V, 50Hz, 10A	26.3 kgs	55.9x35.6x22.9cm
