

Technology Update

software update...07.16.09

A NEW WAY.....

HIDUV's Equipment and UV floor coatings: a revolutionary way to finish floors.

INSTANT START

Lighting system is instant on with no warm-up or cool down periods and no mechanical shutters.

PATENTED TECHNOLOGY

Advanced technologies make HIDUV's equipment the most powerful and reliable machines available.

FEATURES & BENEFITS

Fast, safe, and easy to use.

VERSATILITY

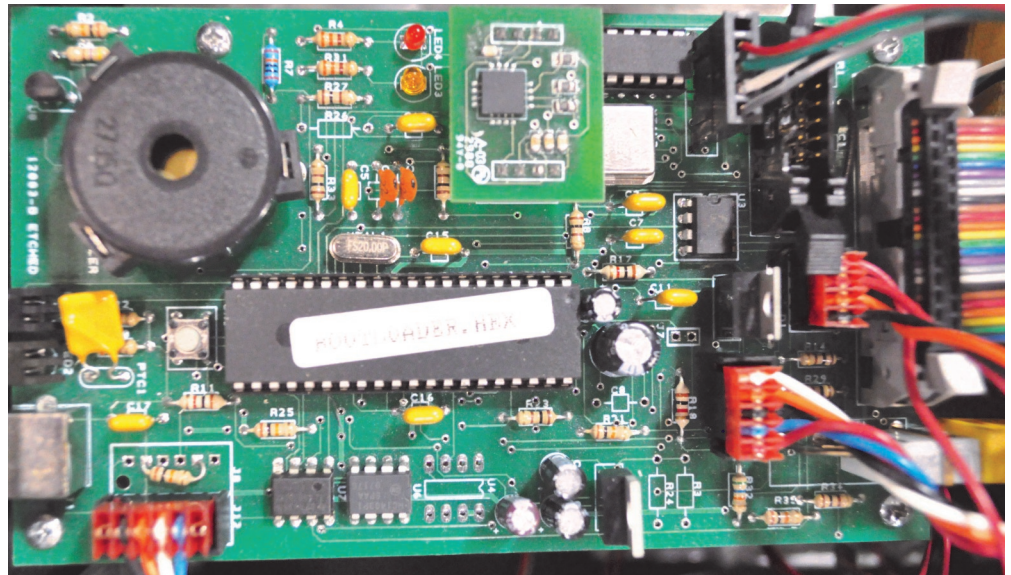

Full product line includes seven models to suit all needs.

SOFTWARE UPDATE...July 16, 2009

As part of our ongoing efforts to improve the quality of our Floor Curing lineup, a very significant firmware update was just implemented which will apply to all future units and can be installed to any units currently in the field if the need arises.

Key Improvements:

- More consistent error/failure status information
- Better speed control stability
- Significantly better speed control ramp-up time, especially on the BULLDOG Models
- More accurate tip-tilt sensing
- Updated USB stack to latest version
- Internal fault counters for logging and diagnostics
- Preliminary support for off-site diagnostics/testing via any computer connected to the Internet through USB
- Reliability of auto-tapping machines connected to a Dyno in improper sequence improved
- Ability to shut off motor without shutting off lamp
- Various minor bug-fixes and improvements based on customer response
